INNOVATIVE NEW COMPANY STARTS LOCALLY

Protect Your Assets Now With New England Shrinkwrap

January 8, 2010, New England Shrinkwrap Announced a new mobile service being provided in New England and other parts of the United States where high cost items need to be protected.

Weather can be damaging to products, new and old, as they are transported or stored outside. A solution to that problem is now available. New England Shrinkwrap will create a durable, weatherproof shrinkwrap cover that can inexpensively protect your belongings from the elements. Almost any size object from a small machine to an entire building can be wrapped.

New England Shrinkwrap has recently completed Dr. Shrink's "Shrinkwrap University" and will be offering mobile shrinkwrap installation services to boat owners, manufacturers, the construction trade, etc. Brent Warish says, "Our goal is to provide excellent service and superior protection to our customers. We use only premium shrinkwrap made of 100% virgin resin material with maximum UV inhibitors built in for long term outside storage. Quality and mil consistency is essential to make a durable and effective cover."

Whether intended for a short-term transportation cover or a long-term seasonal cover, you will have to uncover your belonging at some point. We have you covered in that area as well. When purchasing your cover ask about the Dr. Shrink REBAG® Recycling System. It is convenient and easy to use. Simply remove the cover, put the used # 4 LDPE in the REBAG® and UPS shipping is prepaid in the continental United States.

Cover your assets. Get rid of ugly tarps and prepare for the weather to come.
